

School Analysis Report of GCPS Karian

Date: 15th February

School Name: GCPS Kariyan

Duration of Observation: [Start Date – End Date]

1. Introduction

This report presents an in-depth analysis of the teaching practices, student engagement, and overall school environment at **GCPS Kariyan** over the course of [duration]. The objective of this report is to evaluate the current state of the school system, identify strengths and weaknesses, and provide recommendations for improvement.

No. of Students- 80

2. Observations

A. Infrastructure

The school has **three classrooms**, which are in **poor condition**. The classrooms lack modern teaching tools like digital boards, and **the ceiling height is too low** to install such equipment. The lighting in both the classrooms and bathrooms is inadequate, making it difficult to see and study properly. Additionally, the bathrooms are located directly after the classrooms, without a partition or wall separating them. As a result, **water from the bathrooms often flows into the area outside the classrooms, creating unhygienic conditions for the students.**

The classrooms are dark, as they are situated next to a wall, preventing sunlight from entering through the windows. Overall, the condition of the infrastructure in these rooms is far from ideal and needs significant improvement to create a more conducive learning environment.

B. Teachers

There are four permanent teachers including CHT. They have assigned a teacher to teach the pre-primary students.

- **Teaching Methods:**
- **Student-Teacher Interaction:** Teachers are quite strict with the students. They use the old traditional method to teach the students such as using punishment or slapping students. Not just in the case of extreme misdeeds of any student but also even in the smallest matter they slap students. For instance, on one of my school visiting days, I saw a teacher slapping a student of 3rd class only because the teacher was telling the student to bring the copy for the last few days but she did not bring it.

- **Professionalism and Development:** There is no strong student-teacher bond, and teachers do not focus individually on any student, no matter how weak the student is.

C. Students

Students appear underconfident and frightened while asking any question to the teachers. Only the students who have private tuitions are good in their studies.

For instance, there is a student named Taksh of 5th class who got slapped because he could not solve a math problem. When I interacted with him, I realised that he lacks in the basics but still he did not tell the teacher because of the fear of getting slapped.

D. School Activities

There are no extracurricular activities done with the students for their learning or overall development. They follow the same routine every day. Only during the days of functions do they engage with the cultural activities.

Even teachers also do not take the initiative to engage students with some activities focusing on their psychological or behavioural developments.

3. Personal Experience

A. Challenges Identified

- A key challenge observed is the lack of personalized learning strategies for students.
- Teachers are rigid with their traditional methods and not adaptive to the new teaching methods.
- They do not share any bond with the students and are not friendly with them.
- They do not provide a fearless environment for the students and for this reason, students are not confident enough to ask questions.
- During the conversation with teachers, they told me that the students do not listen if there is no fear or punishment. But when I talked with the students and did some activities with them, I realized that the only thing that matters is the bonding.

B. Interventions

- **Formation of Bal Sansad:** Through this process students have gotten the knowledge about the voting system. Few of them played the roles of the polling officers and led the activity in a very responsible manner.
- **Change in sitting arrangements:** Before making the change in sitting arrangements, I made them understand about the importance of this process

through story telling. And at last, they understood and started this process from the very next day.

- **Activity based learning:** Conducted activities on math and critical thinking which helped them learn about a specific math problem and unlocked the potential of critical thinking.

C. Recommendations

I recommend the school invest in more interactive tools and training for teachers to implement activity-based learning and provide students a fearless environment giving them the space to grow, learn and make mistakes.

4. Support Required: (Divide this section in two parts- A. Administrative support,

B. Foundational support.

5. Conclusion: (Conclude your own thought including the necessities for the support)
